

## Ex. 1

T115952133

2026-09-23

```
print(uuid::UUIDgenerate())
```

```
## [1] "5630aca5-83ee-4df1-aca1-7e2bbb40c6b7"
```

### Question 1

```
1 + 1
```

```
## [1] 2
```

### Question 2

```
3 * 4
```

```
## [1] 12
```

### Question 3

```
set.seed(2026)
sampled_students <- sample(1:55, 10)
sampled_students
```

```
## [1] 29 33 38 45 47 27 44 36 5 31
```

```
mean(sampled_students)
```

```
## [1] 33.5
```

The mean of the 10 randomly sampled student numbers is 33.5.

### Question 4

1. The blood type of a patient: Qualitative (Nominal)
2. The number of customers served in a day: Quantitative (Ratio)
3. The ranking of a restaurant on a five-star scale: Qualitative (Ordinal)
