

EX.3 A114290034

Kelly

2026-10-07

```
rent <- c(12500,13800,11200,15000,12500,26000,14300,13100,12500,16700,14900,13600)
```

R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
mean(rent)
```

```
## [1] 14675
```

```
median(rent)
```

```
## [1] 13700
```

```
table(rent)
```

```
## rent
## 11200 12500 13100 13600 13800 14300 14900 15000 16700 26000
##      1      3      1      1      1      1      1      1      1      1
```

Including Plots

You can also embed plots, for example:

```
rent2 <- rent [-6]
```

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.

```
mean(rent2)
```

```
## [1] 13645.45
```

```
median(rent2)
```

```
## [1] 13600
```

```
table(rent2)
```

```
## rent2
```

```
## 11200 12500 13100 13600 13800 14300 14900 15000 16700
```

```
##      1      3      1      1      1      1      1      1      1
```

```
weight <- c(.36, 32, .32)
```

```
grade <-c(88, 72, 80)
```

```
sum(weight*grade)
```

```
## [1] 2361.28
```
