The mode is= 12500

Q2

```
rent2 <- rent[-6]
```

```
mean(rent2)
```

```
## [1] 13645.45
```

```
median(rent2)
```

```
## [1] 13600
```

2. The mean decreases by NT\$1,029.55, from NT\$14,675 to NT\$13,645.45. So much more than median.
3. The median better describes the typical rent near campus because it is less affected by the unusually high rent of NT\$26,000. Most apartments have rents much closer to the median.

Q3

```
weight <- c(.36,.32,.32)
grade <- c(88, 72, 80)
sum(weight*grade)
```

```
